The shaft and drifts running from the shaft, Improvement No. 3, at 200 feet from the surface, are a general improvement made for the purpose of developing the Copper King, Blue Jay and Grubstake lodes as one mine; from the bottom of this shaft the Blue Jay and Grubstake lodes can be developed to a depth of from 600 to 900 feet, and the Copper King lode to a depth of about 400 feet, the object being to develop and work all of the lodes by one system and with one operating plant.
An undivided one-third interest in Improvement No. 3 is credited to each lode location of this claim.
No other improvements.

INSTRUMENT.

This survey was made with a W & L. E. Gurley Light Mountain Transit. The courses were deflected from a true meridian established by an observation on Polaris at its eastern elongation May 27th 1908. The distances were measured with a 300 feet steel tape made by Justus Roe and Sons.

REPORT.

At the date of the execution of this survey, namely on May 28, 29 and 30th 1908, the only corner of public surveys which I could find within the two mile limit was the quarter section corner between sections 8 and 17 Township 13 North, Range 26 East of Mount Diablo Base and Meridian, which is a granite stone 6 inches in diameter showing 4 inches above the ground, chiseled with a cross on the top and ¼S on N face. This stone was identified to me by Col. J. M. Huston the surveyor who set it, and is a correct intersection for a line run by me from the quarter section corner between sections 5 and 8, south 5276.4 feet and a line from the corner of
