# General Description

This township is generally mountainous with good agricultural land in the bottoms.
It is well watered by Beaver, Summit Spring Gulch, Cabin Creeks & springs
Considerable land may here be utilized by water storage & irrigation
Randolph has an enclosed field in Secs. 22 & 27.
There is no timber in the township except a few willows & aspens in the bottoms.
Owing to bedrock being sometimes close to the surface I could not always set stones to the full depth required in the manual & in such case set the same as deep as practicable which was invariably sufficient to insure permanence.
