Resurvey of the E. bdy. of T. 38 N. R. 23 E.

Chains Prior to beginning the survey of this Tp. I carefully examined the adjustments of the transit, correct the level and collimation error; Then to test, the solar attachment by comparing its indications resulting from solar observations, made during a. m. and p. m. hours, with a true meridian determined by observations on Polaris, I proceed as follows:-

Sept. 18, 1906. At the cor. of Tps. 37 and 38 N. Rgs. 23 and 24 E. heretofore described by me, at 3h p. m. L. m. t.

6/ I set off 41° 0' N. on the lat. arc. and 1° 58' N. on decl. arc. and mark the meridian thus determined by the solar, by a cross on a stone firmly set in the ground. 5.00 chs. N. of the instrument.
