Chains

At point 40.00 chs. in departure from the NE. cor. of sec. 6,

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for ¼ sec. cor., for sec. 6 only, with brass cap mkd.

¼ S 6

1939

raise a mound of stone, 2 ft. base, 1½ ft. high, S. of cor.

The ¼ sec. cor. on S. bdy. Sec. 31, T. 23 S., R. 63 E., a 1 in. iron post, bears S. 89° 54' W., 16.52 chs. dist.

GENERAL DESCRIPTION

The area embraced within T. 24 S., R. 63 E. is rolling to slightly rolling desert, about 2000 feet above sea level. The extreme northwestern corner and the eastern half of the extreme southern portion of township extends slightly into the foothills of the surrounding desert mountain ranges. The entire area drains into a dry lake about 1½ by 4 miles in size in the approximate center of the township. The soil throughout the township is very rocky or gravelly, of poor quality, and supporting a scant growth of cacti of various types and a heavy growth of creosote brush. There is no timber within the township (unless the large yucca cactus are referred to as trees) and very little grass. There is no water within the township and little or no snow in the winter. No livestock are grazed within the township.

There is no settlement within the township. The improved highway from Las Vegas, Nevada to Needles, California passes in a generally north and south direction thru the approximate center of the township. Other than this highway, the power lines and telephone lines (and accessory roads) from Boulder Dam (about 20 miles distant in a northeasterly direction) are the only improvements within the township.
