Special Investigation of T. 11 N., R 21 E.

Conclusion

In making an examination of public land surveys in T 11 N., R 21 E. of the Mt Diablo Base and Meridian I found nearly all the old section corners as described by the Surveyor General, in my retracements. The ¼ sec. cors. of secs. 10 and 15, 11 and 14, 11 and 12, and secs. 13 and 14 were not found. The corners found were well marked and witnessed and identical with the corners as described in the old field notes. In nearly every case the topographical features of the land substantiated the location of these corners.

The main controversy within this township appears to have resulted over the identity of the cor. of secs. 11, 12, 13 and 14, and the ¼ sec. cors. East and west thereof. Two corners were found marked for the cor. of sections 11, 12, 13 and 14, which I have heretofore described in my retracements. In my opinion the stone cor. found in the gulch is the old and original cor. of these sections, since it answers the description of the old cor. as set forth in the original field notes and its location practically agrees with the topographical features described in the old field notes.
