

INDEPENDENT RESURVEY OF THE SUBDIVISION OF T. 27 S., R. 63 E.

Chains

From this cor. the $\frac{1}{4}$ sec. cor. on the E. bdy. sec. 13, bears North 1.295 chs. dist.

At midpoint on the W. bdy. sec. 7,

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for $\frac{1}{4}$ sec. cor. of sec. 7 only, with brass cap mkd.

$\frac{1}{4}$ S 7

1940

of stone, 2 ft. base, $1\frac{1}{2}$ ft. high, E. of cor. raise a mound

From this cor. the $\frac{1}{4}$ sec. cor. on the E. bdy. sec. 12, bears North, 1.27 chs. dist.

At a point on the W. bdy. sec. 6, 40 chs. in latitude from the SW. cor.,

Set an iron post, 3 ft. long, 1 in. diam., 30 ins. in the ground, for $\frac{1}{4}$ sec. cor. of sec. 6 only, with brass cap mkd.

$\frac{1}{4}$ S 6

1940

of stone, 2 ft. $1\frac{1}{2}$ ft. high, E. of cor. raise a mound

From this cor. the $\frac{1}{4}$ sec. cor. on E. bdy. sec. 1, bears North, 1.26 chs. dist.

GENERAL DESCRIPTION

Except for the extreme southwestern portion, this township lies on gentle rolling desert lands having a general slope and drainage to the north. The southwestern corner lies in low broken and rocky hills; the soil is coarse gravelly and rocky and of poor quality. The soil in the rolling desert areas varies from a medium fine sand to a coarse gravel and is generally of poor fertility. The entire area is cut by numerous dry washes. There is no water in the township, nor is there settlement of any kind.

A medium dense undergrowth of the characteristic dry desert types, consisting of creosote brush, black brush and the numerous varieties of cacti -- with yucca, spanish bayonet and joshua predominating -- is to be found throughout the township.

The general elevation above sea level is about 3000 ft.

The main highway between Las Vegas, Nevada, about 50 miles to the north, and Searchlight, Nevada, and on to Needles, California, to the south, runs in a general northerly direction through the east central part of the township.

The only improvements consist of the above highway, a telephone line and two of the principal power transmission lines from Boulder Dam. These power lines, serving the Metropolitan Water District of Southern California, one of steel tower and the other of wooden pole construction, run parallel to each other through the central part of the township in a general north and south direction.

With suitable development of a water supply, the area would be adaptable to the grazing of livestock as native grasses and annual plants are found in all portions of the township.

No indications of mineral or of mining activities were observed.

The magnetic declination at the SE. corner is $16\frac{1}{4}^{\circ}$ E.
