T. 34 S., R. 66 E., M. D. M., Nevada

Chains

Township 34 South, Range 66 East consists only of that small area lying on the right bank of the Colorado River between the southwest side of the Ft. Mohave Indian Reservation and the Nevada-California state boundary.

Lands within the township were originally surveyed by Carl S. Swanholm, Cadastral Engineer, in 1932, under Group 157, Nevada, as shown upon the official plat accepted February 3, 1940. That work also included the retracement of the Nevada-California line and the southwest boundary of the Reservation.

The following surveys are of a retracement and reestablishment of the boundary lines designed to restore the corners thereof in their original positions according to the best available evidence. This work has been undertaken at the request of the Bureau of Reclamation as an administrative measure.

Since the date of the original surveys, the Colorado River has moved westerly by normal erosive processes to the loss of some land as originally returned. The surveys have amended the public land areas representative of such loss. In 1958-60, the Bureau of Reclamation rechannelized the river through this reach. All such work was done within the bed of the river and did not sever any portion of fast land in this township.

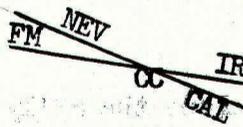

The surveys were executed with a Gurley transit constructed in accordance with the standard specifications of the Bureau. The instrument was in good condition and was frequently tested and adjusted during the course of the surveys to maintain it in good operation. All directions of lines reported herein are true as determined by astronomical observations made upon the survey lines and carried forward by normal transit methods. Measurements were made with a Chicago narrow-band, steel tape, 8 chains in length, which had been compared with a 1 chain standard tape and found correct. All distances reported are based upon horizontal measurements.

Retracement of a Portion  
of the Nevada-California State Boundary  
as originally surveyed by the U. S. Coast & Geodetic Survey.

From the point of intersection of the Nevada-California State Boundary and the southwest side of the Ft. Mohave Indian Reservation boundary, which is marked by a wood post, 8 ft. long, 8 ins. sq., projecting 4 ft. above the ground. The post is harmoniously related to existing corners of the original survey and is accepted as the best available evidence of the original corner.

At the corner point

Set an iron post, 28 ins. long,  $2\frac{1}{2}$  ins. in diam., encased with concrete in a bell tile, 8 ins. in diam., 40 ins. long, 36 ins. in the ground, bell down, with brass cap mkd.

Set the wood post N. of the iron post.

Thence

S.  $45^{\circ} 33'$  E., along the Nevada-California state boundary, on the S. bdy. of sec. 5.

Over nearly level bottom land, through dense undergrowth.
