ELKO FIELD OFFICE  
BURNED AREA EMERGENCY REHABILITATION PLAN AND ACCOMPLISHMENT REPORT**

**PART F - SPECIFICATIONS**

<b>SPECIFICATION TITLE:</b>	<b>NOXIOUS WEED MONITORING AND INVENTORY</b>	<b>AGENCY:</b>	<b>BLM Elko F.O.</b>
<b>PART E LINE ITEM:</b>	<b>M-1 Monitoring (BLM 98-148 III. QI, V)</b>	<b>FISCAL YEAR(S) (list each year):</b>	<b>2001, 2002, 2003</b>

**I. WORK TO BE DONE**

<b>Number and Describe Each Task:</b>	
<b>A.</b>	<b>General Description:</b> Conduct long-term monitoring (3 years) to monitor vegetative recovery within the burned area in order to detect the invasion of invasive/noxious weeds on roads, handlines, dozer lines and other disturbed areas within the Elko Independence Day Fire Complex area. Monitor existing noxious weed infestations within burned areas to determine if expansion is occurring into non-infested areas. Inventory for noxious weeds near existing locations and in areas that have a high probability for invasion within the burned areas.
<b>B.</b>	<b>Location (Suitable) Sites:</b> For monitoring, at known locations of noxious weeds. Inventory areas that have a high potential for weed invasion (or as determined by BLM staff). Critical areas are drainages and along dozer lines of burned areas where bulldozers ran through noxious weed populations—dozers and fire suppression vehicles drove through dense populations of weeds. Monitoring and inventory sites will include but are not limited to the following fires: Bishop, Buckhorn, Double Mountain, Isolation, Maggie Creek, West Pequop, and Wine Cup. Monitor all visible exotic weed populations along road systems and creeks within the fire area. See Map Index, Treatment Maps
<b>C.</b>	<b>Design/Construction Specifications:</b> <ol style="list-style-type: none"> <li>1. Conduct long-term monitoring (3 years) on existing noxious weed populations within the burned areas using protocol determined by the Elko Field Office. Conduct on areas disturbed within the fire and on historic populations of known noxious weed populations to determine spread of invasive species and noxious weeds. Monitoring protocols will be established by BLM and will be implemented in accordance with current management plans.</li> <li>2. Inventory, photo documentation, and map new weed infestations within disturbed lands using Global Positioning System (GPS).</li> <li>3. Initiate agency approval of control measures where monitoring demonstrates the establishment or expansion of known weed populations that threaten the natural regeneration of native vegetation or establishment of effective ground cover if monitoring or inventory determines that expansion is occurring within the burned area or outside the fire perimeter from weed populations inside the burned area.</li> </ol>
<b>D.</b>	<b>Purpose of Treatment Specifications:</b> Protect the ecological integrity and site productivity of pinyon / juniper, riparian, and shrub-steppe plant communities within BLM lands in accordance with established mission statements and management plan guidelines. To detect and document any new expansions of noxious weeds in the burned areas. To control, contain, or eradicate Nevada Listed noxious weeds in the burned areas. To allow the Elko Field Office to implement the Integrated Weed Management Program.
