

Seven Troughs Herd Management Area Pershing County, Nevada

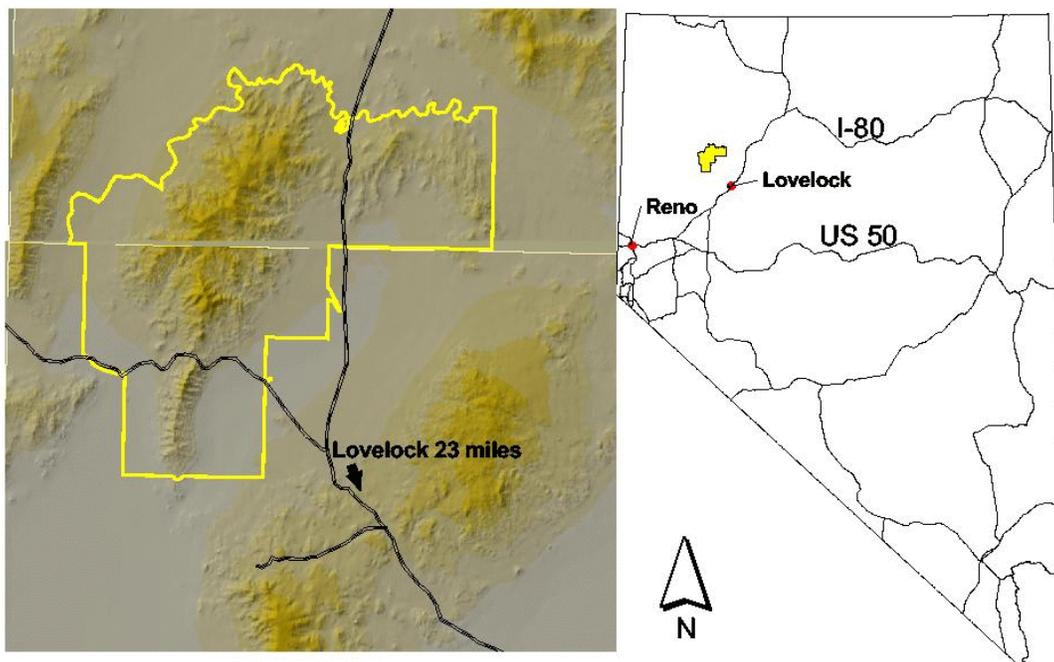

Location / Habitat

The Seven Troughs Herd Management Area (HMA) is located in western Pershing County, approximately 75 miles northeast of Reno, Nevada. The HMA contains approximately 147,910 acres of unfenced public and private lands. The terrain in the area consists of north-south trending mountains separated by broad valleys. Elevations within the HMA range from 4,100 to 7,782 feet. Summer climate is characterized by warm dry days and cool nights. Low yearly precipitation ranges from 4 to 6 inches at lower elevations to approximately 10 inches at higher elevations. The area is also utilized by domestic livestock (cattle and sheep) and numerous wildlife species. Typical wildlife species found in the area include mule deer, pronghorn antelope, chukar partridge, coyote, and various rodents.

Vegetation

Vegetation varies from salt desert shrub communities at lower elevations to big sagebrush/grass communities at upper elevations. Typical species in the salt desert shrub community includes shadscale, bud sage, winterfat, black greasewood, Indian ricegrass, squirreltail and desert needlegrass. Species typical of the sagebrush/grass communities include low sage, Wyoming sagebrush, desert peach, rabbitbrush, needlegrass, basin wildrye, squirreltail, Indian paintbrush and phlox.

Herd Description

The appropriate management level (AML) for wild horses and burros in the HMA is managed in a range from 94 to 156 horses, and 28 to 46 burros. Periodic removals are conducted to maintain the population within the management range. Horses within the HMA are descendants of ranch horses that either escaped or were released into the area. The majority of horses exhibit a bay, brown or sorrel color pattern; however, there are also quite a few buckskin and dun horses found in the area. Burros within the HMA are the descendants of pack animals used by miners and sheep ranchers. The majority of the burros exhibit a gray color pattern; however, pinto burros are also found in the area. It is not possible to provide any specific information on parentage of any wild horse or burro found within the area.
