Instruments

This survey was made with an A. Lietz Company
Transit No. 0523. The bearings were deflected from
the true meridian as established by observations on
Polaris at its elongation. This meridian is the
one from which all surveys made by me in this camp
have been deflected by plate angles and has been
checked by the meridian established by the U. S.
Coast and Geodetic Survey and marked by stone piers
about one mile apart.

The distances were measured with a 650 ft.
standard steel tape.

Report.
