

SURVEY NO. 2593.

Open Cut, in solid rock, $4\frac{1}{2} \times 6$ ft. deep, runs $N.38^{\circ}W$ 18 ft to face, the center of its mouth, from the Location Discovery post, Commodore lode, bears $N.38^{\circ}W.31.8$ ft.

INSTRUMENT:

This survey was made with transit No 1883 made by The A. Leitz Co. The bearings were deflected from the true Meridian, determined by direct solar observations. The distances were measured by a steel tape 660 ft long.

NOTE.

The disagreement between these field notes and those of the location certificate of the Commodore lode with reference to the lengths of the lode line is due to error in the calculations of the latter.

REPORT:

The $\frac{1}{4}$ Sec Cor. bet. Secs. 2 and 11, is a volcanic stone $16 \times 8 \times 8$ ins. set 11 ins. in the ground and marked $\frac{1}{4}$ on the North face, with mound of stone 2 ft. base $1\frac{1}{2}$ ft high North of Cor.

The S.W. Cor. Sec 2, is a volcanic stone $16 \times 8 \times 6$ ins set 11 ins. in the ground, and marked with 5 notches on the South and 2 notches on the East edges, with mound of stones 2 ft base $1\frac{1}{2}$ ft. high, North of the corner.
