I N S T R U M E N T .

This survey was made with a Gurley Light Mountain Transit. The courses were deflected from the true meridian as determined by direct solar observations.

The distances were measured with 100 ft. and 500 ft. steel tapes.

NOTE: The disagreements between these field notes and the location certificates with regard to the distances claimed on the lode line each way from the discovery monument, are due to errors in the latter.
