

## INSTRUMENT.

This survey was made with a Gurley Light Mountain Transit. The courses were deflected from the true meridian as determined by direct solar observation. The distances were measured with 100 and 500 ft. steel tapes.

NOTE: The disagreements between these field notes and the location notices are due to errors in the latter.

## REPORT.

The Cor. common to Secs. 31 and 32 T. 44 N., R. 52 E. and Secs. 5 and 6 T. 43 N., R. 52 E. <sup>M.D.B. and M.</sup> is a mound of rock with no marked stone or post. This corner was identified by retracing the lines North, South, East and West. The distances and alignment agree with notes on file in the U.S. Surveyor General's Office. A juniper tree 16 ins. in diameter bears S. 53 W. 23 ft., which I blazed and scribed B.T. S. 6, 43-52.

N.E. Cor. Snowstorm Lode (Unsurveyed) is a Juniper tree blazed and scribed N.E. Cor. Snowstorm Lode.

This survey was tied to the N.W. Cor. of Sec. 5, T. 43 N., R. 52 E. because it was the nearest corner of the public survey that could be identified.
