

## Survey No. 3227.

## INSTRUMENT.

This survey was made with a Gurley Solar Transit and the distances were measured with 500-ft. and 50-ft. steel tapes. The courses were deflected from a true meridian as determined by direct solar observations.

## R E P O R T .

All lines of this survey, including all ties, were run directly upon the ground. The S. E. Cor. of Section 9, T. 28, N., R. 47, E., M. D. B. & M., is a limestone rock, 9 ins. square, extending 10 ins. above ground, in a mound of earth, with pits in each section, and chiseled with 4 notches on the South face and 3 notches on the East face. This is the nearest standing corner of the public survey that can be identified.

Cor. No. 4, Survey No. 3395, Widows Mine lode, is a pine post, 4 ins. square, extending 3 ft. above the ground, with a mound of earth and stone, and scribed 4--3395. I find lines 3--4 and 4--5 of said survey correct as approved.

NOTE.---The discrepancies between these field notes and the amended location certificate are due to errors in the latter.
