

Survey No. 3640.

—5.

## INSTRUMENT.

This survey was made with a Berger & Sons transit, the courses were deflected from the true meridian as determined by direct solar observation, and the distances were measured with a five hundred foot steel tape.

## REPORT.

The N. E. Cor. Sec. 4 T. 29 N. R. 46 E. M. D. B. & M. is quartzite stone 4 x 4 x 8 ins. above the ground, surrounded by a mound of stone. The north quarter corner of Sec. 4 bears N. 89° 56' W. and is a quartzite stone 6 x 8 x 12 ins. above the ground, surrounded by a mound of stone.

NOTE: No. 4, a tunnel is credited to the Carnation No. 2 lode. The distance and course of said tunnel continued will cut the vein on Carnation No. 2 lode at about 350 ft. depth and about 650 ft. deep at the easternly side line.

From surface indications, the tunnel would cut several veins, paralleling the lode line, and the most advantageous way developing Carnation No. 2 lode.
