

Resurvey of the West Boundary of Fractional

T. 24 S., R. 56 E.

chains

From this point the 1 mile cor. bet. monuments 117 and 118 on the state boundary bears S.46°11'E., 13.93 chs. dist.; an iron post 3 ins. diam., 12 ins. above ground; marked and witnessed as described in the official record.

Land, rolling hills and rolling washland. Soil, gravelly loam, 2d and 3d rate; rocky, 4th rate. Undergrowth, creosote brush and cacti.

There is no final test of the solar attachment to be recorded. The bearings of all lines in this township were determined, or checked, by deflection from the line of the California-Nevada State Boundary.

GENERAL DESCRIPTION

Most of the land in the resurveyed portion of T.24 S., R.56 E. lies in the NE. part of Mesquite Valley and is level, or nearly level. In secs. 5 and 6, and part of 4, 7, 8 and 9; there is a limestone ridge bearing NW. and SE., which rises to an elevation of about 700 ft. above the surrounding country.

The drainage is mostly south or southeast, toward Mesquite dry lake. The drainage to the north of the ridge in the northern part of the township is north and northeast.

The valley soil is a sandy light colored loam, generally first and second rate. The hilly soil is 4th rate limestone and the land adjacent to the hills is gravelly and rocky, 3d and 4th rate.

There is no evidence of mineral activities, other than a few location monuments in the hilly part of the township.

There is no surface water in the township, no settlements, and no wells appear to have been dug.

An old and little used road bears NW. and SE., thru the resurveyed portion of the township.
