

Resurvey of the Idaho-Nevada State Boundary Line  
from the 100 to the 120 Mile Post.

Chains

deviation from the meridian established by Polaris observations; therefore I conclude that the adjustments of the instrument are satisfactory.

June 22, 1911. At 8 a.m., l.m.t., I set off 42° 00' on the lat. arc, and 23° 28' N. on the decl. arc, and determine a meridian with the solar at the witness corner to the 100 mile post on the Idaho-Nevada State Boundary Line, which is a gray stone 24x24x24 ins., mkd. and witnessed as described in the original notes.

Thence I run  
East on a random line along the 100th mile.

8.00 Set temp. 100 mile post, (the reported distance).

Thence along 99th mile.

77.54 Falls 147 lks. N. of the W.C. to the 99th Mile post, which is a black rock, 24x18x5 ins. marked and witnessed as described in original notes, which W.C. is reported to be 4.00 chs. West of its true point.

Therefore the true point for the 100 mile post is 15.4 lks. East and 14.7 lks. South of temp. cor., at which point I set an iron post, 3 ft. long, 3 ins. in dia., 26 ins. in the ground, stamped in cap

I D A in N.  
N E V 1911 in S.  
100 M in E.  
D V I R in W.

Dig pits 36x36x12 ins. N. and S. of post, and raise a mound of earth 5 ft. base, 2½ ft. high, W. of cor.

Thence I run  
N. 88° 55' W. on a true line along the 100th mile.

8.15 The W.C. to the 100 mile post.

Thence West on a random line, continuing measurement from the 100th Mile Post.

80.00 Make diligent search for the 101st mile post, but an unable to find any trace of same.

Continue West.

163.12 Falls 96 lks. N. of the 102nd mile post, which is a stone
