

- Between Townships 19 & 20 N. R. 18 East

Mount Diablo Meridian

Chains From the Corner of Townships
No. 19 and 20 N. Ranges 18 & 19
East I run ~~East~~

West, on a random line between
said Townships, setting temporary mile
and half mile corners.
Variation $16^{\circ} 45'$ East,

(found by observation with
Transit instrument of Polar Star)
I find the Township line
to be ⁶ miles, ¹⁴ ~~7~~ chains and
7⁵ ~~4~~ links, and the falling to
be ^{10.0} ~~7~~ links South of the
Township corner.

The correction will therefore
be $16\frac{1}{4}$ links North per mile,
for the true line and the
course will be S. $89^{\circ} 53'$ East
