

GENERAL DESCRIPTION.

All of the land inside the Reclamation lines is ^{of almost} perfectly level, being cut up by ditches thro' the center, with some alkaline swamp land in the N. tier of Sections. The soil is 1st rate & when irrigated produces wonderful crops of rye & other grasses. There is no timber, the ground being mostly covered with dense Sage-brush, buck brush, & greasewood. Hence some of my stakes were necessarily smaller than required by Manual. There are no rocks or stones.
