

At 1 p.m. May 22nd found by observations on the line run on the East boundary of the Tp. that the Var. at the NE Cor of the Tp is $17^{\circ} 00' E$.

Run $N 89^{\circ} 57' W$ on a blank line back Secs 1 & 36 on the North boundary of the Tp. & at 40 chs. find old $\frac{1}{4}$ sec cor & at 79 chs 83 lks find old sec cor. In order to ascertain the correct length of this boundary I continue the line E at 6 miles 77 chs & 65 lks W & 96 lks North find the Cor to Tps 18 & 19 N. R. 4 & 9 S. E.

As none of this line is correct either for alignment or distance many of the posts being removed or decayed & as Tp 19 N. R. 50 E has not been subdivided & consequently no subdivision lines have been closed on the North boundary I resurvey the same as follows.
