

General Description

The whole of this Township is mountainous mostly covered with rocks. Very fine wild grass but no timber with the exception of a few Aspens in the Creek bottoms. Soil averages from 2nd to 3rd rate. The whole is well watered. and very suitable for Cattle or Sheep range.

In the Southern portion of the Township there are indications of mineral probably gold.

In some cases it was not practicable to set rocks to the stipulated ^{depth in the} manual directions but in all said cases the rocks were set firmly in the ground down to bed-rock.
