

## General Description

Nearly all of this township surveyed under this contract is mountainous, is watered by Adobe & Middle Cusick Creeks & several springs, and affords excellent grazing.

There is a good deal of local attraction in places which would indicate mineral but I am not aware of any discovery of metal.

There is no timber in the township

In some cases I found it impossible to set rocks to prescribed depths on account of the rocky nature of the ground but in all cases set the same as deep as practicable & firmly.
