

Survey commenced May 7<sup>th</sup>  
1900, and executed with  
a Wand L. C. Gully light-  
mount transit instrument with Roller  
attachment. The horizontal  
limb is provided with a  
single vernier reading to  
single minutes which is  
also the least count of the  
verniers of the Latitude and  
Declination Arcs.

The instrument was exam-  
ined and tested on the  
true meridian at Reno and  
found correct, and was  
approved by the Survey Gen  
for Nevada April 2<sup>nd</sup> 1900  
This instrument having  
been tested by me as  
shown in notes of the
