

General Description
The township is very mountainous, especially in the southeastern part, and the soil is very stony, and is 3rd rate.

The land is covered with sage brush and grease wood with a little bunch grass making the land valuable, only, for grazing.

There is some water in this township - a small creek in the south flows North West.

There are several springs in the township.

There is a small field in secs. 15 and 22.
