

Preliminary to beginning the survey of this Twp, I test my instrument on the meridian established at the cor of Twp 29 and 30 N. Rgs 45 and 46 E. on Aug 9th 1901 and find my solar observation to almost coincide with the true line therefore I conclude the instrument to be in adjustment Aug 23/1901 8.00 A.M. Lm. I set off $40^{\circ}26'$ for Lat arc $11^{\circ}34'$ for decl arc and determine a true line by solar observation at the cor of Twp 29 and 30 N. Rgs 44 and 45 E.

Thence I run a random line bet secs 1 and 6 on W bdy.

40.00 I find no trace of old cor.
80.10 Old cor bears 5 lks W. old mound and pits badly delapidated.

Thence I retrace south and find no trace of old $\frac{1}{4}$ or sec cor still.
