E Bdy T22 N. R 26 E.

with the solar, by a cross on the stone already set 5.00 chs N. of my station; this mark falls 0.2 ins E of the true meridian established by the Polaris observation.

The solar apparatus, by P.M. and A.M. observations defines positions for true meridians respectively 0.2 ins East and West of the true meridian established by the Polaris observations; therefore, I conclude the adjustments of the instrument are satisfactory.

The magnetic bearing of the true meridian at 12 o'clock is $16^{\circ}45' \text{ E}$
