

General Description T. 21 N., R. 26 E.

This tp. consists of two more or less distinct portions

The Eastern half mountainous with main axis of lava capping nearly N and S about 2 miles from E. Sdy.

This lava capping is cut by numerous deep ravines and gulches, draining to E, to N, to W and S from the higher portion.

The ravines are filled with drift sand

The lava capping consists of rough high blocky mountains with precipitous sides

The Western portion consists of alkali flat to salt marsh ground, called "Self rising" ground in the more saline portions.

This land extends from W. Sdy to 2 miles East. For a dist. of 4 miles W from S. Sdy when it narrows up
