Land, mountainous.
Soil, rocky. 4th. rate. Good growth
sagebrush, little grass, no timber.
Slopes N. W. May 2, 1911.

General Description.

The land is mountainous over all the boundaries run in this survey. Along the S. bdy., south of secs. 34, 35 and 36; and along the E. bdy. east of secs. 13, 24, 25 and 36 there are good mineral indications, much prospecting having been done and many claims located. The mountains are mainly formed of lime, quartzite, and volcanic rocks, along the line east of secs. 1 and 12 there is little or no mineral indications. In sections 1 and 12 there is some land which might be irrigated from Cottonwood creek.
