^{pits} dig 24 x 18 x 12 ins, crosswise on each line E. and W. 3 ft.; and S. of post 7 ft. dist. and raise a mound of earth 4 ft. base, 2 ft. high S. of cor. Land level.

Soil, good loam. 1st rate.

Good land, fine fertile soil.

Good growth sagebrush, little grass, no timber. Slope S. W.

May 16, 1911

Note:

Observations on Polaris were taken, whenever weather conditions would permit, at my camp, to test the adjustment of my solar attachment as provided for in Secs. 332 and 333 of the Manual and as the results of these observations were satisfactory and showed the solar to be in good condition and adjustment, and as none of the observations were taken upon the lines of the survey, I have not incorporated them in the foregoing field notes as I deem them of no value as a permanent record.
