

RESURVEY of the NORTH BOUNDARY T.22 N., R.27 E.

Chains

August 21, 1911, I begin at the cor. of Tps. 22 and 23 N. Rs. 26 and 27 E., previously described, and run on a random (the course of the old line) N89°46'E on the N. bdy. sec. 6. At 39.20 ch., the theoretical position for $\frac{1}{4}$ sec. cor., after diligent search, I found no evidence of $\frac{1}{4}$ sec. cor. within a radius of 10 ch.; at 79.20 ch., after diligent search, I find no evidence of sec. cor. within a radius of 10 ch. Continuing my line N89°46'E, I failed to find, after diligent search any of the $\frac{1}{4}$ section or section corners on said N. bdy. At 5 miles 75.80 ch. I intersect E. bdy. of Tp. 7.91 ch. S. of the cor. of Tps. 22 and 23 N., Rs. 27 and 28 E.

August 26th, 1911, as T.22 N., R.27 E. and T.23 N., R.27 E. have not been subdivided, and since T.22 N., R.28 E. and T.22 N., R.26 E. have been subdivided, I resurvey said N. bdy. T.22 N., R.27 E. as follows:-

The old Tp. cor. to Tps. 22 and 23 N., Rs. 27 and 28 E., I found to be an igneous rock 8x6x3 ins., loosely set in a small mound of stone, with marks nearly obliterated. Because of its small size, I obliterate all traces of the old cor., and re-establish at same point as follows:-

Set an iron post, 3 ft. long, 3 ins. diam., 24 ins. in the ground, for cor. of Tps. 22 and 23 N., Rs. 27 and 28 E., with brass cap mkd.

T 23 N	
R27E	R28E
S36	S31
S1	S6
R27E	R28E
T 22 N	
1911	

and dig pits 24x24x12 ins. on each line, N. E. and W. 4 ft. and S. of cor. 8 ft. dist. and raise mound of
