

W. Bdy. of T 33 N, R 46 E

Chains

E. of the meridian determined by the Polaris observation.
The solar apparatus by p.m. and a.m. observations, defines positions for meridians, respectively about 0'30" west and 0'16" east of the meridian established by the Polaris observation; therefore I conclude that the adjustments of the instrument are satisfactory.

The magnetic bearing of the true meridian, at 8 h.20m. a.m., is N 18°40'W, the angle thus determined gives the mag. decl. 18°40'E.

May 1, 1914.

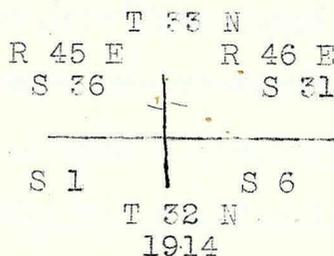

May 5, 1914.

By authority of letter, "E" CGT 369781, I am authorized to examine the work of Transitman Collins in T 33 N

R 46 E. From the above letter it appears that the S. and E. bdys. of this tp. are acceptable and I verify this during the course of my subdivision work I therefore return no notes of the S. and E. bdys. of this tp.

I examine the W. bdy. and find it in an acceptable condition, I therefore adopt the notes of Transitman Collins and return them as original notes as follows:

From the cor. of Tps. 32 and 33 N, Rgs. 45 and 46 E, which cor. is an iron post, 3 ft. long, 3 ins. diam. set 24 ins. in the ground with brass cap mkd.

and with a mound of stone 2 ft. base, 1½ ft. high W. of cor.

I run

North bet. secs. 31 and 36

Ascending over rolling land.

1.25 Wash, course S.W.

18.20 Wash, course S.W.
