and raise a mound of stone 2 ft. base, 1 1/2 ft. high S. of  
cor.

Land; rolling ridges and ravines, sloping to the N.E.

Soil; rather poor quality desert loam, medium texture,  
from a few ins. to a ft. in depth. Underlaid with a clay  
subsoil. Very dry. 3rd. rate. Good growth sage brush  
little grass. General N.E. slope.

July 31, 1914.

General Description.

The land along this line, except for 27.60 chs. at the  
S. end ; which is steep slide and rim rock in Rock creek  
canon; is rolling, sagebrush covered, hills and small  
ravines: sloping to the S.E. on the southerly part of the  
line, to the east along the central part, and to the N.E.  
on the northerly part. The soil is a desert loam, of a  
fine to medium texture, has been derived from the disinte-  
gration of volcanic rocks. Is underlaid by a firm clay sub-  
soil. All very dry. There is a good growth of sage brush  
along the entire distance, but not very much grass. The  
herbage dries up rather early in the season. There is  
no timber of any kind. It is a fair grazing country,  
not the best; nor the worst, just fair. It is not probable  
that crops of any kind can be raised without irrigation
