General Description.

This fractional township is rough and mountainous, except a small portion in the west part of sections 3, 10, 15, and the south east part of section 13, which is slightly rolling. The ridges extend in a north east and south west direction, and the general drainage is to the south west. Mill creek, in the north part of township has very little water in it, and it sinks below the surface of the ground before leaving the fractional township. Rock creek in the south east of section 13 has very little water, which soon sinks below the surface of the ground.

The formation of the township is mostly limestone, a small portion of the south and west is granite. The soil
