82.88 Wash, 12 lks. wide, 1½ ft. deep, 20 ft. below ridge, course E.

85.00 Intersect the 7th Standard Parallel North, at 20.33 chs. E. of the Standard Cor. of secs. 31 and 36, or the SW. cor. of T.36 N., R. 50 E., heretofore described.

At point of intersection, set an iron post 3 ft. long, 2 ins. in dia., 24 ins. in the ground for the closing cor. of secs. 4 and 5, with brass cap mkd:

and raise a mound of stone 2 ft. base, 1½ ft. high, S. of cor.

Land, mountainous.

Soil, gravelly clay loam, with the same subsoil; 3rd rate.

No timber.

Undergrowth, dense sagebrush, good grass for grazing.

General drainage W.

Ruban W. Riley,
U.S. Transitman. September 30, 1914.

GENERAL DESCRIPTION.

This township contains nearly every variety of land from plains to mountains and the soil ranges from a rocky light yellow clay loam to a rich brown loam. The soil in Little Boulder Basin is of a rich brown loam and would produce fair crops with irrigation; the remainder of the township is of a rocky loam, not suitable for producing crops, but does produce a rich grass good for grazing purposes, and can be classed as 2nd and 4th rate soil.

Aspen trees are found in Lynn Creek Canyon, in sec.12, but no place else in the township. There is a heavy growth of sagebrush throughout the township.

The settlement of Goldville is located in the NW. part of Sec.13, and at present there is but one settler, Wm. E. Barney and family, who make it their home, while there are others who only live there temporarily while working on mining claims in the vicinity.

The settlement at Lynn Creek, which is in the NE. part of Sec.12, has about 7 frame houses and there are at present about 25 living there and engaged in mining.

The mining and prospecting is principally confined to the S.½ of Secs.1 and 2; E.½ of Sec.11, all of Sec.12 and N.½ of Sec.13, - there are other prospects in Secs. 3, 4, 10, 14, 15, 16, 22, 23, 24, 26, 35 and 36. There are a good many prospect holes in these sections not mentioned in the notes or on the plat for the reason they could not be seen from the line.

A more thorough examination should be made to determine as to whether these sections should be returned as mineral lands.

The greater part of Secs. 11, 12 and 13, undoubtedly are more valuable for mineral than for agricultural purposes, as large values have already been extracted in the more or less extensive placer workings.

There are 5 settlers in the SW. quarter of Sec. 22,
