GENERAL DESCRIPTION.

The land in this fractional township consists of Smith Creek mountain in the north central part of the township and of high, rolling mountains or mountain foot hills adjacent to it, except the southern part of the township which is rather rough mountains of a general north and south direction and independent of Smith Creek Mountain.

The mountains of this township are made up of volcanic rocks, limestone and quartz pebble conglomerate with a metamorphosed sandstone matrix.

There is more conglomerate than any other kind of rock, Smith Creek Mountain being formed of this kind
