Dig pits 24x18x12 ins; crosswise on each line, E. and W 3 ft. dist and S. of post, 7 ft. dist., and raise a mound of earth, 4 ft. base, 2 ft. high S. of cor.

Land, rolling; general drainage to N.E.; soil, sandy clay loam of medium texture, mixed with some brown gravel, 26 ins. deep; no timber; medium greasewood, shadscale, rabbit brush, sage brush and scattering grass; scant grazing.

June 15, 1915.

## GENERAL DESCRIPTION.

This Tp. is located in Snake Valley along the east slope of the Snake Range of mountains about 50 miles S.E. of Ely and 55 miles North and a little East of Pioche, Nev. The general character of the Iand in the surveyed portion of the tract, with the exception of the extreme S.W. cor. of the Tp., is rolling. Upon investigation of the unsurveyable portion which includes nearly the entire two West ranges of sections, the general character of the land is found to be very rugged and mountainous with an almost continous series of steep quartzite and limestone ledges, bearing N. and S., which are almost barren of vegetation and too steep for grazing purposes. The general drainage of the surveyed portion of the Tp. is to the N.E in the eastern and to the S.E. in the western half.

The soil is the valley and gently rolling sections is a white sandy clay loam of medium texture mixed with some fine brown gravel, 26 ins. deep. That of the extreme western portion of the Tp. bordering on the unsurveyable

sections can be classed as fourth rate, of quartzite and
