GENERAL DESCRIPTION.

The land in this fractional township is nearly level valley, except in the extreme southern portion, which is rough and mountainous. The soil of the valley land is a sandy and gravelly light brown clay loam, averaging about eight inches in depth, with a fine clay silt sub-soil. The mountains, which are of limestone formation, have a shallow and rocky clay soil. The vegetation consists of a light and scattered growth of sage brush, greasewood, shadscale and spanish bayonets.
