

Chains

Note:- Subsequent to the retracement of the E. bdy. of T. 16 S., R. 56 E., I make an examination of the surveys in T. 16 S., R. 57 E. At a point which bears S. $89^{\circ} 52'$ E., 162.34 chs. dist. from the standard cor. of Tps. 16 S., Rs. 56 and 57 E., heretofore mentioned in the retracement of the E. bdy. of T. 16 S., R. 56 E., I find an old cor. marked for the standard cor. of secs. 32 and 33; a limestone $8 \times 8 \times 4$ ins., lying loose on a mound of earth and marked "SC" on one face, 2 and 4 notches on opposite edges. At a point 157.80 chs. N. $0^{\circ} 49'$ W. of the above standard cor. of secs. 32 and 33, I find a limestone, $8 \times 4 \times 4$ ins. above ground, firmly set in a mound of earth, marked with 4 grooves on the E. and 2 grooves on the S. sides. At a point, which bears N. $0^{\circ} 58'$ E., 320.00 chs. dist. from this interior sec. cor., I find very good evidence of the old cor. of secs. 4, 5, 32 and 33, on the N. bdy. of T. 16 S., R. 57 E., which consists of pits and a mound of earth.

It is therefore very evident that two surveys of the Fourth Standard Parallel South have been made, and as hereinbefore recorded, that the subdivisions of T. 17 S., R. 56 E. are dependent upon the most southerly survey of these parallels. From the above examination it is shown that the subdivisions in T. 16 S., R. 57 E. are dependent upon the most northerly survey of this parallel and the old cors. hereinbefore mentioned in the retracement of the E. bdy. of T. 16 S., R. 56 E.

In accordance with instructions I make a dependent resurvey of the E. bdy. of T. 16 S., R. 56 E., initiating my survey from the most southerly Fourth Standard Parallel South, and maintaining the alignment of the W. bdy. of T. 16 S., R. 57 E. as defined by the old cors. existing on the ground. I proceed as follows:-
from the standard cor. of Tps. 16 S., Rs. 56 E. hereinbefore described (For description of this cor. see resurvey
