GENERAL DESCRIPTION

The southwest and northeast portions of this township consist of rough broken mountainous land of a limestone formation. Between these mountainous portions the Indian Springs Valley extends in a northwesterly and southeasterly direction, through the north central portion of the township.

The soil of the valley land is sandy and gravelly clay loam, averaging about 10 inches in depth, underlaid with a fine clay silt subsoil. The soil in the mountainous parts is a shallow and rocky clay loam.

The vegetation of the township consists of sagebrush, shadscale, greasewood, and a scattering growth of Spanish Bayonets and joshua trees. There is no timber in the township.

With the exception of the water which has been developed, within the boundaries of the private land claims, there is no water within the township.

There are no indications of minerals in this township.

There were no settlers residing in this township outside the private land claims at the time of this resurvey
