## GENERAL DESCRIPTION, T. 42 N., R. 23 E.

The western portion of the subdivision of this township is rolling mountainous with numerous outcroppings of volcanic rock. The remaining portion of the township consists of rolling land.

The soil of the lower portions is a rocky, sandy clay loam of medium texture and the soil of the higher slopes is a heavy rocky clay.

The soil throughout the township supports a medium growth of sagebrush and grass affording good grazing for stock.

No portion of the township is suitable for cultivation except a small area along Wall Creek which will produce crops with the aid of irrigation.

The only water found in this township is a small stream in secs. 10, 15, and 23; a small stream flowing in secs. 22 and 23; a small stream in secs. 15 and 16, and a small spring in the SW $\frac{1}{4}$  sec. 15 and the NE $\frac{1}{4}$  sec. 23.
