General Description.

Sections 1, 2, 3, 4, 11, 12, 13, 14, 23, 24, 25,,26, 34, 35, and 36 are mountainous in character, there being many rock slides and ledges.

The only cultivated area is a narrow strip along the main watercourse traversing the SE¹/₄ of section 35 in a north westerly and southeasterly direction. It is settled by James P. Olsen, who has about & acres under cultivation, all of which is subject to irrigation. The ranges adjacent to this area is not sufficient to supply feed for more than 50 head of stack. During the early spring a small stream of water flows through SW¹/₄ of section 36 and SE¹/₄ of section 35, becoming intermittent during the early summer months.

The soil in the lowlands is a sandy loam, while much of a rocky nature prevails in the upper regions.

Some prospecting has been done in sections 35 and 36, but mineral in paying quantities has not been developed. The general drainage is northwesterly.

Sulphur, Nevada, a small settlement, and a station on the Western Pacific Railroad, is located about 18 miles in a northerly direction from the Olsen Ranch
