GENERAL DESCRIPTION,
T. 37 N., R. 48 E.

The land in this township varies from low rolling benches and narrow valleys in the southwestern portion to rugged and rocky mountainous volcanic mesas in the northeast and central portion. The southeast corner is broken by sandy and gravelly foot hills; the northeast corner is low and rolling lying at the base of the volcanic mesa of table lands. These mesas, narrow and broken in many places are capped with a solid rock formation. The ridges, extending in general southerly direction, in the northwestern portion are high and covered with much small surface or slide rock but are not broken by cliffs and outcrops as is the case in the central part of the township.

The entire township is covered with a medium to heavy growth of sagebrush on the lower slopes to a very light scattering growth on the higher rocky ridges.

Except for the extremely rocky portions, good early
