General Description, T. 29 N., R. 22 E.

The land in this township descends from rolling and broken mountainous, in the western portion, to nearly level land in the eastern portion, embracing sections 1, 12, 13, 24, 25, 26, 35, and 36, and the east half of sections 2, 11, 14, and 23.

The soil of the level land, which lies on the extreme west side of the Santa Mate Desert, is a sandy clay of medium texture; the predominant undergrowth over this area being shadscale, sage, and rabbit brush and a very scant growth of grass. The soil of the mountainous portion is generally thickly strewn with surface rock of volcanic origin, and is a clay soil of medium texture, usually shallow on crests of spurs and ridges, with many exposed ledges and outcroppings. The land of the mountainous portion is covered with a medium growth of black sage, scattering buckbrush, and a good growth of grass. There is a very scattering growth of juniper over sections 5, 6, 7, 8, 17, 18, 19, and 20.
