GENERAL DESCRIPTION

The land within the boundaries of this township, consists of low rolling hills and benches, which have a general southerly and easterly exposure and drainage. The south-east portion of the township, is cut by deep washes and ravines.

The soil throughout the township, consists of a shallow clay and sand loam, mixed with loose rock and decomposed lava and limestone, and may be classified as 3rd and 4th rates.

No timber was found on the township, and the undergrowth consists of a scattered and dense growth of native grass, rabbit, and sage brush, which affords fair
