No suitable accessories available.

Land rough, broken mesa land.

Soil, sandy clay 3rd. rate.

Undergrowth, greasewood, cacti and creosote.

No timber.

GENERAL DESCRIPTION

The land through which the third standard parallel passes is a semi-arid desert and is unfit for agriculture. The land in Range 66 E. and for two and one half miles into Range 67 E. is a rolling mesa, broken by numerous long draws, heading in the Mormon Range and draining in a general southwesterly direction to the Meadow Valley Wash. In Range 67 E. the standard parallel crosses the north edge of the southernmost high peak of the Mormon Range. The western slope of this peak is almost impassable, being composed of a series of small limestone spurs separated by rocky gorges, and having practically no foothill approach. It begins at the standard $\frac{1}{4}$ corner of section 33, and rises abruptly approximately 1800 ft. to the summit, which is about 10.00 chs across, and covered with huge boulders and limestone outcrops. The eastern is less precipitous but bedrock is exposed on almost all the higher slopes. The land continues to be very rough and rugged to the standard Tp. corner T. 12 S. Rs. 67 and 68 E. The western two miles of Range 68 E. is in rolling foothills. The land in
