

GENERAL DESCRIPTION

This township is located in Lincoln County, Nevada, about 25 airline miles NW. of Mesquite, Nevada, the nearest town supporting commercial establishments. It is also about 10 miles west of the Utah-Nevada state line.

The terrain consists of desert hills and mountains in the southeastern portion, with rolling desert areas in the northern and western parts. The area is cut by many washes and ravines, draining in a general southerly direction toward the Virgin River. The soil in the hills and mountains consists of igneous rocks which show no indications of minerals of any commercial value. The rolling portions of the township, consist of sandy and gravelly soil, with some sandy loam in the northerly and westerly portions.

There are no inhabitants or settlements, nor any cultivated areas in the township. Water for the most part, is scarce. There are no running streams. Several small springs are found in the township. Tule Springs, which have been developed by cattlemen, are located in sec. 26. Summit Spring is located in sec. 15 and a small spring and reservoir is located on the sec. line, between secs. 22 and 23. No wells were found in the area.

The central, western and northwestern portions of the area are accessible by roads. No roads lead into the eastern tier of sections.

No timber is found in the township. The vegetation consists of a few scattered joshua trees, greasewood, cacti, sego, shadscale, Mormon tea, desert sage, blackbrush and bunch grass. The rolling areas afford grazing for a limited number of cattle. At the time of this survey, cattlemen were hauling water in tank trucks from Tule Springs to the northern part of the township, where it was deposited in tanks for the use of cattle grazing in this area.

The general elevation of the township is about 4000 ft. above sea level.

Tule Springs Nos. 1 and 2, located in the NE $\frac{1}{4}$ SW $\frac{1}{4}$ of sec. 26.

Tule Spring No. 3, located in the SE $\frac{1}{4}$ NW $\frac{1}{4}$ of sec. 26.

Summit Spring, located in the NE $\frac{1}{4}$ SE $\frac{1}{4}$ of sec. 15.

A developed spring is located in the SE $\frac{1}{4}$ NE $\frac{1}{4}$ of sec. 22.
