Land, rolling.

Soil, sandy loam, rock and gravel.

Undergrowth, greasewood, cacti and sagebrush.

Timber, joshua.

GENERAL DESCRIPTION

This township is located in Lincoln County, Nevada and is mostly mountainous and rolling hills. The NW. part of the township is rolling hills cut by numerous washes which drain to the SW.

The soil on the steep slopes varies from rocks to sand and gravel, with some coarse loam in the rolling land.

This township has a small net-work of roads in the north half running generally east and west. Jones Spring located in sec. 17 and Snow Spring located in sec. 2 are the only surface waters in the township. This area is used for grazing purposes; a large part of it is very poor for grazing but some is fair.

The principal undergrowth found here is sagebrush, greasewood and cacti. No indications of mineralization were noted. The timber consists of joshua trees, only.
