Land, rolling.
Soil, sand and gravel.

Undergrowth, joshua, sagebrush, greasewood and cacti.

GENERAL DESCRIPTION

This township varies from rolling and broken hills along the west bdy. to gently rolling and nearly level desert land in the eastern portions. The soil on the steep slopes varies from rocks to sand and gravel on the rolling slopes, coarse loam to sand and gravel on the level land. Drainage is generally to the south. The average elevation is about 3500 ft. above sea level.

The entire township is covered with the ordinary semi-desert type vegetation; the predominating undergrowth being joshua, sagebrush, greasewood, cacti and native grasses.
