

SUBDIVISION OF T. 27 N., R. 26 E.

Chains	N. 0° 02' E., on a random line, bet. secs. 5 and 6.
40.00	Set temp. $\frac{1}{4}$ sec. cor.
84.40	Intersect the N. bdy. of the Tp. 3 lks. E. of the cor. of secs. 5, 6, 31 and 32, previously described.
	Thence
	S. 0° 01' W., on true line bet. secs. 5 and 6.
	Over broken hilly land thru dense undergrowth. Asc. 140 ft. gradual NW. slope.
30.30	Spur, slopes S. 55° W. from S. 65° E.
44.40	Set an iron post, 3 ft. long, 1 in. diam., 30 ins. in the ground, with a deposit of charcoal at base of post, for $\frac{1}{4}$ sec. cor., with brass cap mkd.
	$\frac{1}{4}$
	S 6 S 5
	1938
55.00	Draw, drains N. 65° W., asc. 230 ft. over broken N. and NE. slopes.
60.10	End of spur from S. 10° W., asc. along E. side of top.
76.40	Spur, slopes S. 65° W., asc. along NW. slope.
84.40	The cor. of secs. 5, 6, 7 and 8.
	Land, broken foothills. Soil, gravelly to rocky loam; 3d rate. Undergrowth, sagebrush, rabbitbrush. Grazing, fair to good.

GENERAL DESCRIPTION

The lands of this township vary from rough mountainous in the southwestern and north central portions to gentle rolling in the eastern and extreme northwestern portions. The average elevation of the main divide or ridge is about 7700 ft.; the elevation of the lowest point, in the extreme southeast corner, is about 4100 ft.

The entire area is covered with undergrowth; sagebrush and rabbitbrush predominate on the higher slopes while shadscale predominates on the lower areas. A very limited growth of scrubby juniper and some small pinon pine timber is found on the upper slopes of the main ridge. This ridge is locally known as "Sahwave Mountain". Grasses and annual weeds and small shrubs afford good grazing on these higher slopes but utilization of the area for grazing is limited on account of the scarcity of suitable watering holes.

Small seepage springs are situated in the township as follows:

Spring of good water but of very small flow in NE $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 9.

Seepage springs in the vicinity of the $\frac{1}{4}$ sec. cor. of secs. 3 and 10.

It is doubtful if these springs could be sufficiently developed to provide water for maximum utilization of the grazing area.

No indications of mineral deposits or past mining activities were noted.

The nearest post office and supply point is at Lovelock, Nevada, which is about 45 miles distant in a general easterly direction.

The few roads serving this area are in very poor condition.

The mean magnetic declination is 18° 35' E.
