

Subdivision of T. 30 N., R. 27 E.

Chains

The point for the  $\frac{1}{4}$  sec. cor. on the N. bdy. of sec. 5 is at mid-point on the N. bdy. of the Tp.

At the corner point

Set an iron post, 3 ft. long, 1 in. diam., 6 ins. in the ground to bedrock and in a mound of stone, 8 ft. base, to top, with brass cap mkd.

$\frac{1}{4}$  S 5  
1949

From this cor. the standard  $\frac{1}{4}$  sec. cor. of sec. 32, T. 31 N., R. 27 E., bears West, 2.38 chs. dist.

The point for the  $\frac{1}{4}$  sec. cor. on the N. bdy. of sec. 6 is at a point, West, 40.00 chs. dist. from the closing cor. of secs. 5 and 6.

At the corner point

Set an iron post, 3 ft. long, 1 in. diam., 28 ins. in the ground, with brass cap mkd.

$\frac{1}{4}$  S 6  
1949

raise a mound of stone, 3 ft. base,  $2\frac{1}{2}$  ft. high, S. of cor.

From this cor. the standard  $\frac{1}{4}$  sec. cor. of sec. 31, T. 31 N., R. 27 E., bears West, 2.38 chs. dist.

General Description

The terrain within the boundaries of this township varies from nearly level in the SE. quarter, to rolling through the center; merging to hilly easterly and westerly and breaking into mountainous land. The general elevation ranges from 4400 ft. to 5000 ft. along the E. bdy. and to 6500 ft. in the north-westerly part; which is called the Lava Beds range, and is very rough rugged and stony. The soil over the nearly level area and the rolling land, is a fine to coarser sand merging to gravel and getting shallower in depth toward hilly and mountainous elevations. The hills and mountain slopes are mostly disintegrated rocks and talus, very shallow. There is considerable alkali throughout the area. The main drainage systems are two nearly parallel washes through the 2nd and 3rd tiers of sections and draining southerly toward a dry lake flat. It is a very dry plateau desert region. No surface water of any kind was observed in the township. The whole area in this township is covered with a scattering to dense growth of shadscale merged with low scrub sagebrush and other varieties of desert shrubbery with a scant growth of grass. All of which is suited only for limited grazing for sheep. Very little prospecting has been carried on in the hilly and mountain area for gold and other minerals supposed to underly the region; which some strata surface formation indicate. There is a rough desert chuky and dusty road parallel along the 2nd meridional line throughout the township, used very little.
